European Architects Network

The world continues to be a rapidly changing-place. Our clients and collaborators are faced with fierce competition in their own markets as they respond to economic and political change; the European Union continues to flourish and expand eastwards increasing the prosperity of many whilst China and India bestow many opportunities for those of us willing to participate and invest.

The success of the European Architects Network (EAN) in the last years has been underpinned by our understanding of local markets along with the bringing-together of international specialists to work on projects in the major capital cities of Europe. More recently, as a network, we have started to collaborate to find solutions to sustainable design. We're aware that as designers we need to help reduce carbon emissions and limit the damaging effects of climate change.

The EAN has extensive design experience across many sectors, including sustainable design, with 12 offices offering a range of diverse services including: master planning; mixed use; hospitality; retail; offices; interiors; transportation; sports architecture; conservation and strategic consulting services.

The EAN is **unique in Europe** and demonstrates a capability to deliver design innovation, expertise and knowledge in a truly collaborative and seamless way.

Who?

The EAN is a flexible association of architects, delivering excellent architecture with innovative and sustainable design across Europe.

Why?

The EAN serves clients who want to undertake projects in countries across Europe, offering a local presence with access to global expertise.

What?

The Network has extensive design experience across many sectors, offering a range of diverse services including master planning, mixed use, hospitality, retail, offices, interiors and product design, transportation, sports architecture, conservation and strategic consulting services.

Where?

The EAN has 12 offices in cities throughout Europe. Our knowledge of local market variations and national planning and building laws offers the appeal of working with well-established European practices.

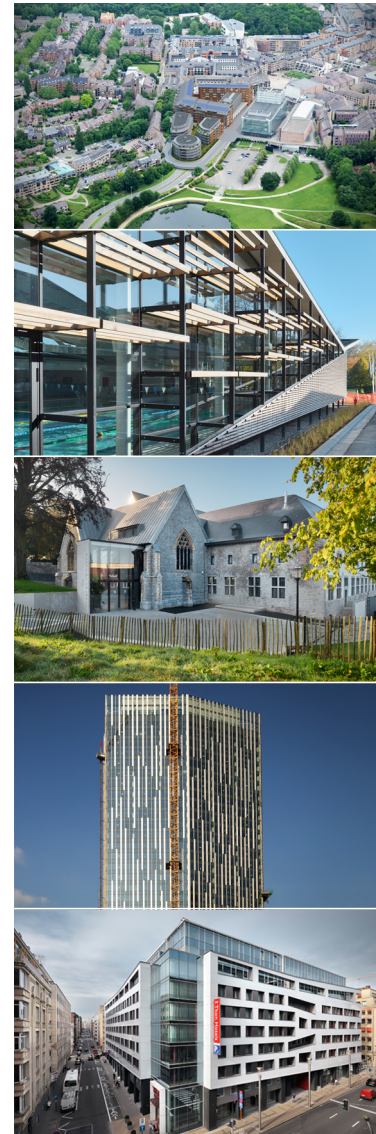

How?

By assembling teams drawn from the Network practices, EAN is able to offer unparalleled access to experts with experience of building types in every sector. Unlike the regional outposts offered by competitors, each office is an integral part of a European and global network.
